## A BRIEF HISTORY OF TECHNOLOGY

**1970**  
The first Apple computer was released in April 1976. This was the first computer readily available to the general public. For the most part society was pretty "green" to the whole concept.

**1980**  
After Apple, other companies like IBM started creating personal computers and others followed shortly after, searching for new ways to introduce devices into people's everyday lives.

**1990**  
The technological advancements made in the 90's was revolutionary. It gave birth to the World Wide Web, better known today as the Internet. Today, billions of actions are made through this platform.

**2000**  
Before this decade, a cell phone was just a phone. Many previously used devices adopted new purposes. With more people using tech to better their lives, internet security became a serious issue.

**2010**  
This decade was filled with innovations, creations and realizations beyond many people's wildest dreams.
