Understanding Moral Injury

Moral injury is not a temporary emotional response to the horrors of war. It is a complex psychological wound that affects the core of a person's identity and sense of worth. Soldiers who witness or participate in actions

that violate their beliefs or ethical values may experience feelings of guilt, shame, betrayal, and profound emotional pain. These wounds can lead to a range of psychological and behavioral problems, including depression, anxiety, substance abuse, and relationship difficulties.

Symptoms and Diagnosis

The symptoms of moral injury can vary from person to person, but common signs include:

- Persistent feelings of guilt, shame, or remorse
- Difficulty forgiving oneself or others
- Loss of trust and faith in humanity
- Nightmares or flashbacks related to the traumatic event
- Emotional numbing or avoidance
- Self-destructive behaviors

Diagnosing moral injury can be challenging, as it is often not recognized or understood by healthcare professionals. However, *Soul Repair* provides a detailed overview of the diagnostic criteria and assessment tools available.

The Path to Healing

Healing from moral injury is a complex and multifaceted process. *Soul Repair* outlines a comprehensive treatment approach that integrates evidence-based therapies with spiritual and philosophical perspectives.
